Here are some choices and ideas about the design of my barchart.

- I tried to select an appropriate data set. That is; discrete data, not too many or too few bars. Not very big differences in the data (to avoid having just a few very large bars). Preferably data that shows something surprising, like that the wettest month last year was in the summer.
- Colors should match the topic. So rainy colors like blue and grey. Not too happy, its about rain.
- Hovering over a bar should highlight the bar (so its color should become brighter).
- Bars should be seperated (otherwise it looks like a histogram)
- The tooltip has a small lightning instead of a pointing arrow, just a funny detail.
- The barchart should have a title, axes should be labeled, quantities should have a unit.
- y-axis has to start at 0.
